Australia

Dear Sir/Madam,

I purchased a 60kg Ultra Anchor and 13mm swivel for my vessel *MY Sharon*, a 78' Ferretti Motor Yacht. I replaced my galvanised CQR plough anchor with the Ultra and have noticed a remarkable improvement in both setting performance and holding power, not to mention its first class presentation on the bow.

Anchoring technology has obviously come a long way from the days of using a traditional plough anchor. The design and features that the Ultra offers in comparison to other style anchors clearly sets it apart from the competition. The hollow shank and lead filled tip combination offers immediate bottom penetration and the new generation style concaved base provides the holding power when needed.

The peace of mind that the secure anchoring provided enabled my crew to get a good night's sleep as we went around Australia with the Ultra Anchor, compared with the nightmare we experienced in the Mediterranean, dragging our anchor all the time.

I am a very satisfied customer and encourage any other owner who has had anchoring problems in the past to invest in an Ultra Anchor. It has delivered unquestionable performance, reliability and peace of mind. Anchoring is no longer an issue on board MY Sharon.

Thank you for producing such a great product.

Regards
Silvio Pradella
